```
        Yard/
        House/
```

- Finally, in each of the `Yard/` and `House/` Directories create a `todos.txt` file and a `done.txt` file. Do this with a single line, without changing directories! Use expansion! The resulting folder/file structure should look like this:

```
Year/
    Winter/
        Yard/
            todos.txt
            done.txt
        House/
            todos.txt
            done.txt
    Spring/
        Yard/
            todos.txt
            done.txt
        House/
            todos.txt
            done.txt
    Summer/
        Yard/
            todos.txt
            done.txt
        House/
            todos.txt
            done.txt
    Fall/
        Yard/
            todos.txt
            done.txt
        House/
            todos.txt
            done.txt
```
